Rational
Louis' draught lines and glycol pack have not been upgraded since the major
renovations in 2002. It is recommended that lines get replace approximately every 10 years. The lines are beginning to show signs of disintegration and our line cleaning
company has highly recommened that the lines be replaced. As part of the updgrade
we are also recommending that we replace the aging glycol pack. This equipment
keeps the lines cool. Other upgrades would include new fobs for pressurizing the lines, and couplers which keeps beer waste down when changing kegs.
and couplets which keeps seel waste down when changing kegs.

Rational
The USSU provides 2 chairs for each table that is available to book in the Arts tunnel. It has been well over a decade since any chairs have been purchased for the area and
we are currently using a collection of mismatched and damaged chairs for the area.
This purchase will help to create a more professional environment where all bookings will have a clean padded matching chair to use.

Iva
Rational  Viouventhy uses a manual quillatine outtor, which requires some precision energtion by staff
XL currently uses a manual guillotine cutter, which requires some precision operation by staff and significan physical labour on larger jobs. Maby of the jobs such as business cards,
require extreme precison to complete, which is often tough with less than full time staff. To
decrease human error, physical fatigue, and remove possible injury from repetitive and strenuous motion, and electric cutter is bring requested. The machine will allow for perfect
cutting and increased speed on all of our jobs that require cutting as part of the finishiing.
With an increase in printing for items such as business cards, the operation will be able to perform the jobs quickly and acurrately. The machine will also fit into a small footprint given
the tight space constraints at XL.
